

COMPATIBILITY OF CDP-801 System

The CDP-801 one button kit and handset have been upgraded with newer circuitry due to chip availability.

The new gate unit (from ZA-660-A kit) has a light grey housing and the new handset a white glossy housing (ZA-661).

Functionality is the same but the new version is **NOT COMPATIBLE** to the older style units.

New white handsets (ZA-661) **cannot** be added to older dark grey gate units (ZA-650). Old black handsets (ZA-651) **cannot** be linked to new light grey gate units (ZA-660-A). Therefore if an old handset or old gate unit needs replacing, they should only be replaced with the older style units. Also note that the new handset is not compatible to the 4 button gate units (ZA-654) and only older handsets (ZA-651) can be used with it.

NEW (ZA-660-A, ZA-661)

OLD (ZA-650, ZA-651)
